JavaScript for Web Designers Course Outline

Below is the table of contents for the JavaScript for Web Designers course.

1. Getting started

Goals and objectives
Course outline
Computing requirements
Prerequisites
How do I communicate?
How will I learn?
How will I be graded?
Navigation buttons
Menu tree
Text input exercises
Browser view exercises
Browser text input exercises
Quiz exercises
How do I start?

2. The need for scripting

Scripting overview
Where do we use scripting?
Scripting in Web browsers
JavaScript
JScript
ECMAScript
Java
What can JavaScript do?
What can JavaScript not do?
Browser wars and JavaScript compatibility
Scripting beyond this course
JavaScript-based languages
Web-based languages
Quiz
Summary

3. Hello world

Writing Hello World to the screen
Another method to write to the screen
Adding JavaScript to an HTML page
Using JavaScript in the head tag

Using JavaScript with an HTML element
Linking to an external script
Summary
4. JavaScript basics
Understanding JavaScript
Writing JavaScript
Debugging JavaScript
Adding comments
Understanding JavaScript characteristics
Case-sensitivity
Reserved words
Variables
Variable types
Quotation marks
Escaping characters
JavaScript statements
JavaScript objects and properties
JavaScript methods
JavaScript functions
JavaScript operators
Mathematical operators
Assignment operators
Comparison operators
Logical operators
Bitwise and special operators
JavaScript expressions
Review
Quiz
Summary
Getting ready for the exercises
Exercise 1
5. Interacting with the user
Concepts: variables and conditionals
JavaScript variables
Local versus global variables
If /else statements
Dialog boxes
Asking for confirmation
Prompting
Using variables to store information
Adding variables to strings
Alerts
Debugging with alerts
Quiz
Summary
Exercise 2
6. JavaScript events
Calling JavaScript from HTML: Events
Concepts: parameters and the *this* keyword

Using parameters in a function
The *this* keyword
Page load events
Event: onload
Event: onunload
Form events
Events: onfocus, onblur
Event: onchange
Events: onsubmit, onreset
Mouse events
Event: onclick
Events: onmouseover, onmouseout
Events: onmousedown, onmouseup
Combining events and CSS properties
Common events and event handlers
Quiz
Summary
Exercise 3

7. Working with forms

Quick review of forms
Concepts: return, parseFloat, Arrays, and isNaN
Return command
Using parseFloat and parseInt
isNaN function
Arrays
Referring to forms in JavaScript
Changing the value of a field in a form
Creating drop-down links
Using checkboxes in forms
Using radio buttons
Reading values entered in a form
Doing form calculations
Form input validation
Why validate with JavaScript?
Checking user input in a form
Using the return command in validation
Form validation – checking for a minimum number
Checking for an empty field using onblur
Validating an email address
Quiz
Summary
Exercise 4

Assignment one

Goals
Description
Grading
Requirements
Tools
Submitting the assignment

8. Working with objects

Object hierarchy
Assigning properties to an object
Using methods to manipulate objects
Creating a new custom object
Concepts: eval and length
Length property
eval function
Window object
Opening a pop-up window
Enlarging an image
Creating a simple timer
Document object
String object
Joining strings – concatenation
Fetching characters
Finding and fetching pieces
Splitting a string
Arrays
Setting and getting values
Joining arrays
Date object
Today
Getters and setters
Message with today's date
Local time, UTC
Math object
Image object
Image slideshow
Quiz
Summary
Exercise 5
Web search assignment

9. Changing HTML with JavaScript

Concepts: conditions and loops
If/else statement
While loop
For loops
Do/while loop
Changing properties
Changing image properties
Writing HTML dynamically
Doing mathematical calculations
Doing conversions
Creating a simple order form
Creating new Web pages using JavaScript
Using rollovers
Putting events and properties together: image rollovers
Using image rollovers with links
More scenarios
Quiz

Summary
Exercise 6
10. Using the DOM
More about the DOM tree
Understanding the DOM
Accessing the DOM tree
Using the DOM in Web pages
Using styles with DOM
Finding elements
Changing attributes
Creating elements
Setting a time delay
Hiding and displaying text
Cookies
Cookie property
Remembering values between events
Remembering values with a global variable
Remembering values with a DOM property
Quiz
Summary
Exercise 7
11. JavaScript “recipes”
Identifying browsers
Using links to execute JavaScript
Opening a popup in the center of the page
Viewing a directory
Detecting screen resolution
Checking and unchecking checkboxes
Window status bar
Counting the characters in a form field
Assignment two
Goals
Description
Grading
Requirements
Submitting the assignment
